

CORE PROJECT DOCUMENTATION PACK

Project Status — Where We Are Now

Document 08 of 08 · STATUS

M A D HALO Technologies

This document is meant to be updated regularly as the project progresses — treat it as a living snapshot, not a fixed record.

COMPLETED

- Early functional prototype built using Base44, demonstrating the core concept
- Core project vision, mission, and naming established (HI NGE SIYANI / Siyani)
- Initial language set identified: English, isiZulu, Sepedi, Tshivenda, Xitsonga

IN DEVELOPMENT

- The serious/long-term version of the platform, being built in Delphi 12 FMX with Supabase as the backend
- User onboarding and profile system
- Language selection and language-switching functionality
- Multilingual text interaction with Siyani
- Core education and public-service use cases
- The underlying AI/content architecture that powers Siyani's responses

NEXT

- Voice input and output for Siyani
- Expanded and more comprehensive education functionality
- Better, deeper government/public-service navigation
- Structured language quality testing, including native-speaker validation
- Building out curated multilingual content and terminology glossaries
- Establishing university/language-researcher partnerships
- Setting up a structured user feedback and evaluation loop

FUTURE / RESEARCH

- Additional South African official languages beyond the initial five
- Low-data and offline-friendly capabilities for rural/lower-connectivity users
- Custom or fine-tuned language and speech models, where justified by data and need
- Wider integrations with education and government information sources
- Community-driven content and language improvement
- Broader ecosystem expansion beyond the current scope

- Long-term sustainability and funding model
